Shutdown Routine

Authors: Andrew Struthers, Basil Alsulami
Date: 5/21/2019

If machine is active when forward is called, the code will:
unlatch Motor_Enable
unlatch PowerFlex_Forward
unlatch PowerFlex_Reverse
unlatch the green indicator
unlatch the yellow indicator
latch the red indicator
move 0 indo the motor speed bit
return to MainRoutine

0

Motor_Enable	PowerFlex_Forward	PowerFlex_Reverse	Green_Indicator	Yellow_Indicator	Red_Indicator
<Local:2:O.Data.0>	<Local:2:O.Data.6>	<Local:2:O.Data.7>	<Local:2:O.Data.1>	<Local:2:O.Data.2>	<Local:2:O.Data.5>
(U)	(U)	(U)	(U)	(U)	(L)

MOV
Move
Source   0

Dest   Local:3:O.Ch0Data
                      0

RET
Return from Subroutine

(End)
